

ABOUT THE COMPANY

A fire engineering consultancy established in 2020, we have quickly grown to a team of 13 and are constantly looking for ways to improve on and broaden the range of our services to give ourselves a competitive edge. Pushing the bounds of a fire engineer's scope beyond the norm has meshed nicely with the R&D benefits that Leyton have assisted us to claim.

HOW THE BUSINESS IS INNOVATING

They are providing bespoke solutions to complex developments, in particular using computer modelling techniques to develop and demonstrate the effectiveness of these solutions. They are increasingly working on modular developments which require innovative solutions.

THE R&D BENEFIT

Due to the shortage of fire engineers, employment consultants are inflating salaries and charging large recruitment fees. The R&D benefit has enabled Orion to remain a competitive employer.

The process was very straightforward. Initially, we were concerned it would be lengthy and complex, but once we sat down with Leyton and worked through we were finished within an hour. For the return we received it was an hour very well spent.

Orion Fire Engineering

ABOUT LEYTON

Leyton is an international consulting firm that helps businesses leverage financial non-dilutive incentives to accelerate their growth and achieve long lasting performance.

We simplify your access to these complex incentives. Our combined teams of highly skilled Tax and Technical specialists, enhanced with cutting-edge digital tools developed internally, maximize the financial benefits for any type of businesses.

With compliance always front of mind, we have been delivering optimal services for our clients for over 24 years. This provides peace of mind that you will always receive the maximum benefit, without taking risks.
